How to Access Assignments

The general instructions (`instructions.pdf`) on how to access the testbed infrastructure and the actual testbed assignments are only available through git in the material repository. The website `https://cns.net.cit.tum.de` only shows the tutorials and lecture slides.

Use the connect service to get access to the material repository.

1 Connect Service

The access the assignment descriptions you need access to the material repository. The website `https://cns.net.cit.tum.de` shows all contents of this repository, but not the assignments.

The Git repositories are hosted on the LRZ GitLab. As a member of TUM you already have an account there. Use your LRZ ID (e. g. `ga12abc`) to log in to GitLab. To link your identity in the context of the lecture with your GitLab account and to give you access to the testbed infrastructure, there is the *connect service*:

1. Log in to `https://gitlab.lrz.de` if you have never logged in there before, and accept the terms of use.
2. Open `https://www.moodle.tum.de/mod/assign/view.php?id=4035148`, use the link there (make sure to expand the “feedback” line to copy the full link) and start the authentication.
3. Afterwards, GitLab will ask you to grant the connect service access to your personal information (name, user ID).
4. Finally, you will see a confirmation that your request is being processed.

Shortly afterwards you will get access to the material repository[1] in GitLab.
